Product Description:

OX-ON Magnum Flex Lanyard Supreme 1.9 m is an extremely strong energy absorbing lanyard of 1.9 metres, which is tested on users between 50 and 150 kg, and which you can for example use in connection with scaffolding work. The lanyard is made of strong 35 mm polyester tubular webbing with energy absorber. At a fall, the energy absorber gradually reduces the energy to avoid a too abrupt slowdown. Furthermore, the energy absorbing lanyard has an integrated strap for fall rescue situations. OX-ON Magnum Flex Lanyard Supreme is provided with a large easy-to-use aluminium scaffold hook that has a 60 mm opening and an aluminium twistlock hook with a 22 mm opening, which ensures you quick and easy operation. If possible, the anchorage point must be above head height in order to reduce the vertical clearance. You should notice that the vertical clearance at any time must be calculated before starting work with the fall protection. For further information on required vertical clearance, please read the attached user manual or contact OX-ON.
